

Poison!

HOW TO HELP YOUR PET IF THEY HAVE
INGESTED POISON OR A TOXIC SUBSTANCE ...

24hour
EXCELLENCE IN VETERINARY CARE

- If you have seen your pet ingest poison within the last half hour you can either induce vomiting at home by making a ball of washing powder and dosing it like a tablet OR bring them in and we will induce vomiting in hospital
- If your pet is already showing symptoms of poisoning (vomiting, tremors, seizures, weakness, etc) DO NOT attempt to induce vomiting!
- DO NOT make your pet drink milk or eggs. These will not counteract any poisons and will most likely just lead to choking.
- When bringing in a pet who has eaten something toxic, please bring in the packaging to show the vet.

FROM OUR SHOP
